# Cute Small Hand-drawn Letter Mold

Launch new molds to create small handwritten letters for decoration art.
All letters are original hand-drawn letters.
Hangul characters are perfect for Korean "My Fave" activities.

## 1 The small, 1 cm, double character※ is so cute!

**All 3mm thick**

あ

1cm

1cm

PADICO original hand-drawn characters.
Easy to decorate with them.

* Hangul has no edges.

## 2 Include cute motifs for decoration

Each mold comes with motifs
such as angel wings and a crown.
Each mold has different designed motifs,
so you may want to get them all!

## 3 Plate mold is included in Hangul script one!
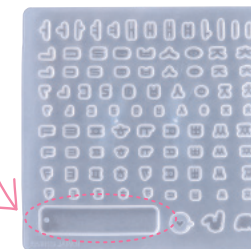

You can make a Hangul plate
by combining vowels
and consonants on the plate
and pasting those letters on it!

Ball chain is not included.

Metal parts are pasted.

Looks gorgeous with metal parts.

PADICO "Cat" mold.

**Name Plate**

Make your original nameplates!

Just the right size at 7 cm long!

Arrangements are flexible!
Make a plate key ring
with your favorite letters on it.

## Recommended Products List    Recommended Items

| | UV-LED Resin | Stick | Mixing Palette | Wrok Sheet |
|---|---|---|---|---|
| **Make letters** | **UV-LED Coating Resin Star Drop [Gloss] [Matte] ※**<br>Low viscosity prevents air bubbles.<br>Matte resin makes it easier to read letters. | **Mixing Stick**<br>Recommend a needle stick for detailed part. | **Mixing Palette Mini**<br>Can make multi-colored resin in small quantities. | **Placing the mold on the work sheet makes it easier to see the shape of the letters.**<br><br>★ Wrok Sheet<br>Download the work sheet here. |
| **Make plates**<br>**Join letters** | **Star Drop UV-LED Resin Hard, Moon Drop, Sun Drop**<br>For plates, recommend Moon or Sun Drop with low cure shrinkage! | **・Mixing Stick**<br>Stiring<br>**・Stir Stick**<br>Air bubbles are unlikely to form! | **Mixing Palette [Size-S]**<br>Use S size for a slightly higher amount of resin to make a plate! | Print it with proper size. |

(Left column label: **Resin Work Process**)

※ The recommended coating resins can only be used for Tafrect Mold Letter Series. Thick molds may cause corners to stand up and high temperatures to degrade molds.
・The above list of recommended items is for your reference only. You can create resin pieces without using them.

## Notes on creation

●Please read the instructions on the back of the package before creation.
●Bubbles are likely to occur, so remove them by tapping the corners of the mold with a needle stick.
●Coating resins produce a harder finish than regular resins.
●Colorant with white added makes it easier to see the color of the letters.
●When decorating, please use commercially available adhesives.

<Caution> ●Distortion may occur due to the shape. ●Coating resins produce a harder finish than regular resins. Please be careful not to injure yourself when removing burrs. dispose of the removed burrs immediately in the trash. ●The pieces are small and should not be left unattended. There is a risk of injury from accidental ingestion or stepping on the product. ●This mold is for resin, clay and other crafts only. Do not use for other purposes such as food. After use, wash gently with a mild detergent and keep out of reach of children and pets after drying. ●Do not place in direct sunlight or near fire. It may cause deformation or alteration. ●When removing the piece from the mold, allow the resin to cool before removing it. ●Repeated molding dozens of times while the mold is hot may cause the surface to become cloudy or deformed. ●Cannot be used in microwave ovens or ovens. ●Due to the qualities of the material, there may be minor scratches on the surface. Please understand in advance. ●Do not use solvents or oils. This can cause deterioration and fogging. ●Do not use metal spatulas or cutters, as they are easily scratched.

## Mold Description

Common to all types
Color：translucent／Material：Thermoplastic resin
Mold size：W150mm×D5mm×H150mm
Package size：W170mm×D5.5mm×H215mm
Total weight: approx. 45 g (Mold only: approx. 43 g)
Upper temperature limit：100-120℃
Colder temperature limit：-20℃
Storage conditions：Out of direct sunlight

### How to create letters with edges

**①**
Make 2 colors of colored resin. Colorant with white added makes it easier to see the color of letters.

**Point!**
Clip the black paper★ to a clear file and place the mold on top of it to see the letterforms easier.

**②**
Place one drop of either of the two colored resins in the first layer of letters in the mold.

**③**
After pouring the resin, place a stick needle against the corner of the mold to remove any air bubbles.

**④**
Fill the resin up to the top of the first layer of letters and cure with a UV-LED lamp.

**⑤**
Fill the mold to the ② top with another colored resin and cure on both sides with a lamp.

**⑥**
When slightly cooled, gently remove it. Remove burrs with nippers.

### How to join letters

**①**
Place the letters face down on masking tape, so that they connect with the resin and cure.

### How to set rings

**①**
Cut the 9-pin short, turn the letters inside out, and place the resin and the 9-pin on top to cure.

**②**
Place resin over the entire surface and let it harden.

16

### How to make Hangul scripts

**①**
Make colored resin. Colorant with white added makes it easier to see the color of letters.

Clip the black paper★ to a clear file and place the mold on top of it to see the letterforms easier.
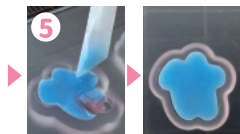

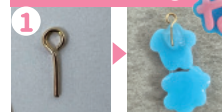

**②**
Place one drop of either of the two colored resins in the first layer of letters in the mold.

**③**
After pouring the resin, place a stick needle against the corner of the mold to remove any air bubbles.

**④**
Fill the resin up to the top of the first layer of letters and cure with a UV-LED lamp.

**Point!**

**⑤**
When slightly cooled, gently remove it. Remove burrs with nippers.

### How to join letters & set rings

**①**
Place a drop of resin (about 5~10mm ball) on a clear file, place a cured hangul part on it, and light it on both sides with LED lamp.

**②**
Cut the 9-pin short, turn the letters inside out, and place the resin and the 9-pin on top to cure.

**③**
Put 2 to 3 drops of resin on a clear file, place ② face up, and set both sides with a light to cure.

### How to make a plate

**①**
Pour the resin into the mold up to the top of the plate, and cure it on both sides under a LED light. Use commercially available adhesives to decorate.
